

ViewMail

ViewMail harnesses the power of the Sagaxis wavelet CODEC to enable people and businesses to record, compress and send the highest quality video email messages available today. The email recipient receives an engaging email with a unique interactive link inviting retrieval of the video message from a video server. This approach conserves email storage space and permits the video to be forwarded to an unlimited number of recipients without using valuable bandwidth.

The ViewMail system also provides comprehensive feedback to the ViewMail sender by reporting who viewed the video, when the person saw it and if it was forwarded to a friend or colleague.

Unlike other video email software, Sagaxis ViewMail offers a complete system to let you quickly create and distribute professional looking personal messages, corporate communications and advertising campaigns using custom graphic templates and high quality video.

ViewMail manages email address lists and video campaigns while the Sagaxis Video Server stores the videos for retrieval. Only Sagaxis ViewMail provides reports that show which messages were viewed, when they were seen and if they were forwarded to other recipients.

With ViewMail you can:

- Create eye-catching video product demonstrations.
- Deliver high-quality advertising clips.
- Notify employees and partners of product news or policy changes.
- Provide meeting updates to colleagues.
- Offer personal congratulations.
- Send greetings and holiday wishes to out-of-town family members.
- Personalize thank you messages.

An Excellent Communications Tool for:

- Sales Teams
- Product Development Teams
- Support Groups
- Video Training
- Regional & Branch Communications
- Corporate Announcements
- Connecting Family & Friends
- Advertising & Public Relations
